EDUCATION

Mathematics

Southern New Hampshire University

05/2019 – Present

Grad 2023

EXPERIENCE

Software Developer

NuCruits

04/2019 – Present

NuCruits is an emerging employment platform that is focused on getting students into the workforce. Our platform is preparing to leave the development stage and begin beta testing. I create all the front end and back end code need for the platform. I'm in charge of QA, so I create and perform its testing. I've been tasked with turning the UI into Angular NuCruits' interfaces.

Software Intern

Funding Founding

12/2018 – 04/2019

During my time with the organization I worked on many Angular and Firebase assignments. These assignments involved problems such as user authentication, interacting with databases, storing user's files, unit testing, etc.

Participant

CT Tech Challenge

10/2018

During this competition me and my team were tasked with creating a website to help raise awareness on the ongoing opioid crisis. We used the Django framework to render our content. The website gave users the ability to learn about the issue and post encouraging content.

LANGUAGES / FRAMEWORKS

Java

JavaScript

Python

SQL

HTML

CSS

C++

Node

Angular

Django

REST

Firebase

Git

Android SDK

PERSONAL PROJECTS

Barnyard Background

- <https://github.com/karikai/Barnyard-Breakout>
- An android game written in Java using LibGdx library. User takes control of a small bird as they avoid obstacles while increasing score.

NuCruits

- <https://nucruits.com>
- Currently we're hosting a simple landing page that allows students to sign up for our upcoming platform. But, we're putting the final touches on our platform, which includes messaging, job searching, user profiles and much more.

EA on Call

- <https://eaoncall.com>
- A simple landing page I created for my mother's administrative assistant business. Users have the ability to make appointments that are stored in a NoSQL database.

STEAMford

- <https://steamford.org>
- I made this website during my internship, it was designed to help increase STEAM education in the Stamford area. Users can create a profile and upload content (such as readings and videos). In the back-end I used Firebase to authenticate users, structure data, and perform CRUD operations.

SKILLS

Full Stack Web Development

experience with several web frameworks and comfortable programming on each level of the stack

Mobile Development

good understanding of mobile development, especially proficient with Android SDK

Autodidact

self-learner with a large capacity for growth

Self-Starter

driven and competent, I do not need constant direction or supervision to be productive
